## Big news at the 10<sup>th</sup> edition 2017

9-12 February 2017, Verona Fairgrounds

### Wood is a great choice. *Legno&Edilizia launches its message*

#### LEGNO&EDILIZIA launches its message

“Wood is a great choice”: in terms of price, health, comfort, safety and aesthetic appeal.

This is the slogan for the 10th international Legno&Edilizia show, which will take place at Verona **Exhibition Centre from Thursday 9 to Sunday 12 February 2017**. There is a new format for this edition, which has been expanded to include all areas of construction in which wood can offer sound, successful solutions: structures, roofing and coverings, flooring, doors and windows. Verona will become the Italian hub for wooden construction. **Ado Rebuli**, the President of Piemmeti SpA, which organizes the biennial exhibition said that the newly overhauled event will serve as a nerve centre that brings together companies, carpenters, engineers, architects and professional firms.

**Raul Barbieri** is the General Manager of Piemmeti SpA. He points out that attention to this Fair goes beyond the use of wood in all building sectors.

**Legno&Edilizia** is thus consolidating its status as the only trade fair in Italy that specializes in the use of wood in construction. It has always been an outstanding event, as underlined by the 72% approval rating among exhibitors and total of 20,000 visitors at the last edition. Other new features for 2017 will include a greater focus on operators from outside Italy. Delegations have been invited from Eastern Europe and emerging countries. The range of content on display has been increased and there will be a selection of practical demonstrations and workshops, as well as a broader array of conventions. The technical partner of the event will be **ARCA**, an offshoot of the Independent Province of Trento that is behind the number one certification system for buildings with wooden frameworks.

#### Construction

Wooden construction in its most specific and defining sense will remain the distinguishing field at Legno&Edilizia. The spotlight will be on the leading producers of structures and materials for wooden homes and manufacturers of wood processing machinery, as well as all of the other players involved in designing and building environmentally friendly constructions. As usual, Legno&Edilizia will offer a comprehensive overview of the entire wooden construction industry, from initial handling of timber (trading, imports, distribution and sawmills) to processing machinery and accessories for optimizing individual components.

- Timber: imports, distribution and trading • Wooden frameworks for civil uses and public systems • Wood carpentry: beams and panels • Machines and tools for the use of wood in construction • Wood for working, semi-finished goods, formwork and frames • Prefabricated wooden homes and external structures • Safety systems • Software, certification and design firms • Fastening systems • Wooden walls • Sawmills.

#### Floorings

The first new addition at Legno&Edilizia 2017 will be a whole area especially for wooden flooring. The aim is to present a comprehensive, exhaustive range for architects, construction firms and private individuals. Interior design schemes will help to bring out the best of flooring featuring all kinds of forms, woods and finishes, including solid wood, laminated wood and panelling.

The goal behind the area is to raise awareness of the products and their performance and characteristics, as well as the best way to fit them, using the best fastening methods and products for the foundations and the environment. A key contribution to the topic will unquestionably be played by outdoor flooring.

- Technical and industrial flooring • Ceilings, staircases and wooden panelling • Door and window frames • Production machines • Treatment machines • Environmentally friendly stains, varnishes, fillers and glues • Parquet flooring • Insulation materials.

#### Roofing and coverings

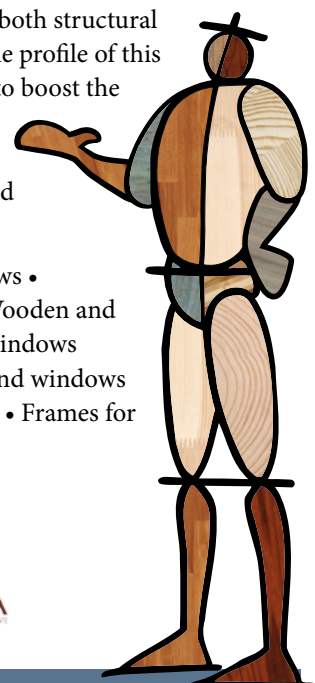

Roofing and coverings have always been a key part of Legno&Edilizia. Nonetheless, it is important to give even more prominence to architectural features that play a crucial role in the construction of private and industrial buildings, from the classic sloping roofs with tiles to laminated or solid wood roofs, for both rebuilding after extensions and roof repairs and renovations.

- Roofing and coverings • Traditional and green, organic finishes • Insulation materials, sheets and accessories • Trusses and glulam • Attics • Panelling • False ceilings in general.

#### Doors and windows

An essential new addition at Legno&Edilizia 2017 will be a specific focus on the world of doors and windows. Doors, windows, frames, production machinery and installation accessories play a crucial role in the design and construction of buildings in both structural and aesthetic terms. By raising the profile of this field, Legno&Edilizia 2017 aims to boost the visibility not only of wooden constructions but also of all the wooden components that are used in traditional masonry buildings.

- Wooden doors • Wooden windows • Components and accessories • Wooden and wooden/aluminium doors and windows • Frames • Coverings for doors and windows • Dormer windows and skylights • Frames for pocket doors.

The tenth edition of Legno&Edilizia will take place from **Thursday 9 to Sunday 12 February 2017** in halls 11 and 12 (Re

Teodorico entrance) of Verona Exhibition Centre.

There is a new format for this edition, which has been expanded to include all areas of construction in which wood can offer sound, successful solutions: **Verona the Italian hub for the use of wood in all areas of construction.**

**Edilizia**  
• Construction  
• Bauen

**Tetti e coperture**
