VERONA

RENEWABLE ENERGIES IN AGRICULTURE

IN THE INNOVATION GROOVE

Ecological transition and corporate profitability as some of the answers to the future of agriculture. Agro-energy and agro-voltaics (solar photovoltaic systems on agricultural crops developed in accordance with new sustainable criteria) **fully combine these two aspects: new business models** with farming companies always at the heart of the matter, suitably backed up by the political vision contained in the National Restart and Resilience Plan (PNRR) with appropriate economic resources for the **development of agro-voltaic, agricultural bio-gas and bio-methane systems, as well as agro-solar parks.** **Fieragricola 2022 will highlight these sectors,** following promotion in previous editions, today called upon, together with agriculture, to respond to the major challenges of the XXI century: feed a constantly growing population and safeguard the planet, the environment, water resources, the landscape and fighting climate change.

THE IDEA

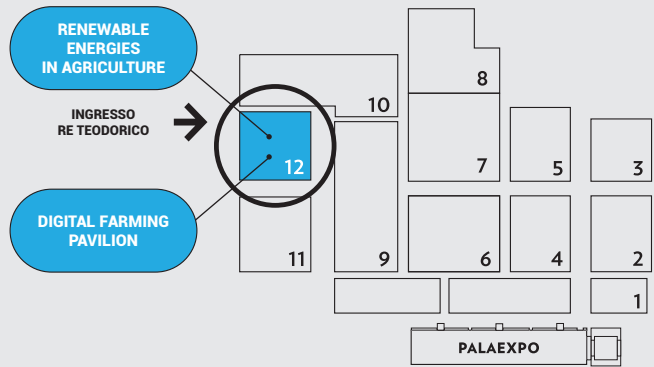

Renewable and clean energy generated by exploiting resources in the best possible manner and new ways for integrating processes into the circular economy must be part of a rapidly expanding agricultural sector.

This is the objective for Fieragricola 2022: create an exhibition area focusing on energy solutions for the sustainability of the agricultural system that also ensure long-term profitability of sector companies.

The exhibition area will be flanked by a workshop area hosting a series of **training appointments** relating to applications of the technologies and solutions on display.

REASONS FOR TAKING PART

- Meet the key players in agricultural and livestock sectors.
- Create new business opportunities in a sector looking for new sources of profitability and technologies attentive to climate change issues.
- Create a direct comparison with agricultural and livestock worlds.

WHO ATTENDS

Agricultural entrepreneurs, breeders, feed producers, agricultural machinery dealers, wine cellars, farm holiday centres, agronomists, consultants, designers, certification and standardization bodies, sector associations.

WHO EXHIBITS

- Equipment and products for solid, liquid and gaseous bio-energy
- Bio-gas and bio-methane equipment
- Photovoltaic (including agro-voltaic)
- Solar energy
- Mini wind power
- Co-generation and tri-generation, including components
- Consultancy and design services, research centres
- Sector institutions and associations
